

7. SECURE NETWORK ARCHITECTURE

DATE: 11/03/2026

Aim: To learn about and implement security best practices for network environments.
Procedure:

1. Log into TryHackMe and open the Secure Network Architecture room.
2. Study the fundamentals of secure network design and architecture.
3. Understand concepts like network segmentation and zoning.
4. Learn the role of security devices such as firewalls and IDS/IPS.
5. Explore best practices for protecting network infrastructure.
6. Complete the tasks and answer the questions in the room.
7. Review the summary and confirm completion.

Tasks:

The screenshot displays the 'Secure Network Architecture' room interface on TryHackMe. At the top, the room title is followed by a subtitle 'Learn about and implement security best practices for network environments.' Below this, statistics show a duration of 60 minutes and 46,987 participants. Action buttons include 'Share your achievement', 'Save Room', and '707 Recommend'. An 'Options' dropdown menu is also present. A green progress bar indicates 'Room completed (100%)'. A list of eight tasks follows, each marked as completed with a green checkmark: Task 1 Introduction, Task 2 Network Segmentation, Task 3 Common Secure Network Architecture, Task 4 Network Security Policies and Controls, Task 5 Zone-Pair Policies and Filtering, Task 6 Validating Network Traffic, Task 7 Addressing Common Attacks, and Task 8 Conclusion.

Secure Network Architecture
Learn about and implement security best practices for network environments.

Options

Room completed (100%)

- Task 1 ✓ Introduction
- Task 2 ✓ Network Segmentation
- Task 3 ✓ Common Secure Network Architecture
- Task 4 ✓ Network Security Policies and Controls
- Task 5 ✓ Zone-Pair Policies and Filtering
- Task 6 ✓ Validating Network Traffic
- Task 7 ✓ Addressing Common Attacks
- Task 8 ✓ Conclusion

CR23431 - Network Security Lab

TASK 1 - Introduction

Answer the questions below

Read the above and continue to the next task.

No answer needed

✓ Correct Answer

TASK 2 – Network segmentation

Answer the questions below

How many trunks are present in this configuration?

4

✓ Correct Answer

What is the VLAN tag ID for interface eth12?

30

✓ Correct Answer

TASK 3 – Common Secure Network Architecture

Answer the questions below

From the above table, what zone would a user connecting to a public web server be in?

External

✓ Correct Answer

From the above table, what zone would a public web server be in?

DMZ

✓ Correct Answer

From the above table, what zone would a core domain controller be placed in?

Restricted

✓ Correct Answer

TASK 4 – Network Security Policy and Controls

Answer the questions below

According to the corresponding ACL policy, will the first packet result in a drop or accept?

accept

✓ Correct Answer

According to the corresponding ACL policy, will the second packet result in a drop or accept?

drop

✓ Correct Answer

TASK 5 – Zone Pair Policies and Filtering

What is the flag found after filling in all blanks on the static site?

THM[M05tly_53cure]

✓ Correct Answer

TASK 6 – Validating Network Traffic

Does SSL inspection require a man-in-the-middle proxy? (Y/N)

Y

✓ Correct Answer

What platform processes data sent from an SSL proxy?

Unified Threat Management

✓ Correct Answer

TASK 7 – Addressing Common Attacks

Where does DHCP snooping store leased IP addresses from untrusted hosts?

DHCP Binding Database

✓ Correct Answer

Will a switch drop or accept a DHCPRELEASE packet?

Drop

✓ Correct Answer

Does dynamic ARP inspection use the DHCP binding database? (Y/N)

Y

✓ Correct Answer

Dynamic ARP inspection will match an IP address and what other packet detail?

MAC Address

✓ Correct Answer

TASK 8 – Conclusion

Answer the questions below

Read the above and continue learning!

No answer needed

✓ Correct Answer

Result:

Thus the TryHackMe room Secure Network Architecture was completed successfully.
